

Abstract of the Disclosure

A display device comprising a front frame having an annular picture frame and having a pair of side faces and a pair of end faces provided in outer circumferential sides of the picture frame, a mold frame sandwiched by the pair of side faces and the pair of end faces, and a display panel arranged between the front frame and the mold frame. Stopper pieces for alignment of the display panel are formed in the side faces and the end faces. A display device in which the picture frame of the front frame can be narrowed is obtainable.
